

Medical Student Geographic Mobility

Percentage of physicians (N=16,025) practicing in the same region they exited residency training from five years later. Territories value represents the percentage of trainees found training in the Territories five years after exit from training.

For the physicians who were not practicing in the region they completed their residency (N=2,733) what percentage returned to the region they earned their MD? Territories will have no records as there are no medical faculties there.
